Valtech Leverages Talent in College Station, Texas

Software and services development solutions provider's newest ProximityCenter™ to support increasing success for clients

DALLAS – Sept. 28, 2007 – Valtech, a software and product development solutions provider focused on helping clients achieve and sustain business agility, has opened its newest ProximityCenter™ in College Station, Texas. By establishing a base near a major university and providing easy access to clients – Valtech has put its OnDemand™ services at the fingertips of its clients in the Southwest. The talent pool distributed by Texas A&M University and growth shown in the Bryan-College Station area made it an ideal site for the ProximityCenter.

“Some of Valtech’s greatest advancements for our customers have been realized in ProximityCenters, and our College Station center is poised for just such excellence,” said Valtech CEO Jonathan Poole. “In this environment, we see a great opportunity to attract and nurture the kind of talent that will drive further success for our clients.”

The ProximityCenter gives its customers access to the resources they need on personal and local levels. With its new site, Valtech has created a unique environment designed to support employee growth, while increasing an individual’s potential and software development. Valtech has personally designed the center to support unique Agile and Lean development models. Training and support rooms allow senior-level employees to update and train co-workers on industry advancements and breakthroughs. The site also fosters creativity, which contributes to process improvements and increasing client success.

“Employees possessing leadership, communication and intelligence are what we strive to bring to the Valtech family, and in order to maximize that potential, we’ve placed them in an

environment that breeds success,” Poole said. “Valtech didn’t just stumble onto College Station; we know ‘Aggieland’ is a place where we can achieve our goals and, in turn, the goals of our clients.”

In College Station, six- to eight-person teams help improve development efficiency and the ability to respond effectively to business change. With plans of increasing the center’s staff by a third by year’s end, Valtech isn’t limiting those positions to just Texas A&M graduates; however, with roughly 50 percent of its staff calling themselves “former students” at the university, the opportunity is presented for Aggies to make a successful transition from college life into the business world. Since its arrival to the Bryan-College Station area, Valtech estimates it has already driven close to \$1 million back into local revenue and plans on becoming a vested part of the area’s economy.

About Valtech

Valtech is a global provider of high performance, enterprise software development outsourcing and organizational transformation services. Valtech’s OnDemand™ services are focused on one single outcome: Delivering Business Agility. Serving customers across a variety of industries, including finance, travel, energy, media, high-tech and online, Valtech OnDemand™ offerings result in priority business ideas and products converted to working, tested and deployable software every two weeks.
